ENTOMOLOGY

Graduate students have the option of obtaining their degree in the specific academic department of their major professor.

Graduate Area of Concentration

Graduate students pursuing an entomology area of concentration have the opportunity to study and conduct research within a number of graduate programs across the university in the Departments of Horticulture, Crop and Soil Science, Fisheries and Wildlife, and Forest Ecosystems and Society. Graduate students obtain their degree within the academic department of their major professor.

Entomologists continue to be at the forefront of basic and applied research in molecular biology, ecology, evolutionary biology, biodiversity, and pest management. The modern fields of physiology, ecology and systematics have their origins in research originally undertaken with insects, and entomologists help lead these disciplines today. Given the unique importance of insects in biodiversity and ecosystem processes, their roles in crop production and public health, and their value as model organisms for the exploration of basic scientific questions, there is demand for graduates who have acquired entomological expertise.

The Entomology Program is a component of the Agricultural Experiment Station, which has many research facilities for students and staff, including farms, greenhouses, an aquatic insect laboratory, and a forest insect research laboratory. In addition to OSU faculty, state and federal entomologists stationed across the state are available for consultation in their fields of specialization. The Oregon State Arthropod Collection has nearly 3,000,000 specimens of insects and mites and is a recognized center for research in insect systematics and biodiversity.

Faculty

Botany and Plant Pathology McEvoy

Crop and Soil Science Dreves, Reitz, Rao, Rondon
Environmental and Molecular Toxicology Jepson
Fisheries and Wildlife DeBano, Wooster
Forest Ecosystems and Society Ross
Horticulture Choi, Hooven, Lambinos, Langellotto-Rhodaback, Lee, Miller, Rosetta, Sagili, Shearer, Walton, Wiman
Zoology Giebultowicz, Lylte, Madision, Marshall

ENT 101. INTRODUCTION TO CROP, SOIL, AND INSECT SCIENCE. (1 Credit)
Introduces students with interests in crop, soil, and insect sciences to educational and professional opportunities in these disciplines. Speakers will discuss opportunities in research and academia as well as in the applied professional job market. Open to all students. CROSSLISTED as CROP 101, SOIL 101.

ENT 300. *PLAGUES, PESTS, AND POLITICS. (3 Credits)
Integration and interaction of agricultural and public health aspects of entomology in society and history. CROSSLISTED as HORT 330. (Bacc Core Course)
Attributes: CSST – Core, Synthesis, Science/Technology/Society
Equivalent to: BI 300, HORT 330

ENT 311. INTRODUCTION TO INSECT PEST MANAGEMENT. (4 Credits)
Identification, biology and management of injurious and beneficial insects. Concurrent laboratory is designed to provide hands-on experience with identification of insect groups of relevance to agricultural cropping systems. Lec/lab.

ENT 322. HONEY BEE BIOLOGY AND BEEKEEPING. (3 Credits)
In this introduction to the fascinating honey bee and its biology, honey bees are used as model organisms to illustrate general principles of biology, entomology, and sociobiology. Students will learn the basics of beekeeping, have an opportunity to manipulate honey bee colonies, and gain hands-on experience, prevailing winter weather permitting.

ENT 331. *POLLINATORS IN PERIL. (3 Credits)
Pollinators, human influences on pollination systems, and the potential consequences of pollinator decline. An introduction to the skills needed to investigate media reports and multidisciplinary scientific research. Effects of pesticides, habitat fragmentation, climate change, invasive species, pests, pathogens, and other threats to pollinators in critical natural and agricultural systems around the world. CROSSLISTED as HORT 331. (Bacc Core Course)
Attributes: CSGI – Core, Synth, Global Issues
Equivalent to: HORT 331

ENT 401. RESEARCH. (1-16 Credits)
Work on approved problems carried on in the library, laboratory or field. This course is repeatable for 16 credits.

ENT 403. THESIS. (1-16 Credits)
This course is repeatable for 16 credits.

ENT 405. READING AND CONFERENCE. (1-16 Credits)
Reading and discussions on special topics. This course is repeatable for 16 credits.

ENT 407. SEMINAR. (1-2 Credits)
Graded P/N. This course is repeatable for 16 credits.

ENT 410. INTERNSHIP. (1-16 Credits)
This course is repeatable for 16 credits.
ENT 420. INSECT ECOLOGY. (3 Credits)
Insect ecology, evolution, and management. Biophysical ecology; foraging and feeding; life cycles; population dynamics, regulation, and control; species interactions including herbivore-plant, predator-prey, parasite-host, competition, and mutualism; diversity, food web structure, agricultural ecology, exercises merge models, experiments, and sampling. Offered on even years.

ENT 440. ISSUES IN INSECT TOXICOLOGY. (3 Credits)
Introduction to concepts and mechanisms associated with molecular toxicology as it relates to insects, including interactions with naturally occurring and synthetic compounds. Overview of current research in insect toxicology including resistance to pesticides, protection of non-target species, and use of insects as model organisms. Discussion of laboratory and field approaches and potential strategies to address issues in insect toxicology.

ENT 444. INSECT AGROECOLOGY. (3 Credits)
Agroecology incorporates ecological concepts and principles to the design and management of sustainable agricultural systems. Topics include: the role of insects in sustainable agricultural systems; application of the principles of insect ecology to better manage insect pests and maximize crop yield; conserving beneficial insects and other natural resources in agroecosystems and the surrounding landscape. CROSSLISTED as HORT 444.
Equivalent to: HORT 444

ENT 499. SPECIAL TOPICS. (1-6 Credits)
Equivalent to: FW 499
This course is repeatable for 6 credits.

ENT 501. RESEARCH. (1-16 Credits)
Work on approved problems carried on in the library, laboratory or field.
This course is repeatable for 16 credits.

ENT 503. THESIS. (1-16 Credits)
This course is repeatable for 999 credits.

ENT 505. READING AND CONFERENCE. (1-16 Credits)
Reading and discussions on special topics.
This course is repeatable for 16 credits.

ENT 507. SEMINAR. (1-2 Credits)
Graded P/N.
This course is repeatable for 16 credits.

ENT 508. WORKSHOP. (1-16 Credits)
This course is repeatable for 16 credits.

ENT 509. PRACTICUM IN TEACHING. (1-3 Credits)
Developing skills and competence in teaching under staff supervision; organization and presentation of instructional material by assisting in laboratory, recitation, and lectures. CROSSLISTED as CROP 509, PBG 509, SOIL 509.
Equivalent to: CROP 509, PBG 509, SOIL 509
This course is repeatable for 9 credits.

ENT 510. INTERNSHIP. (1-16 Credits)
This course is repeatable for 16 credits.

ENT 518. CURRENT TOPICS IN ENTOMOLOGY. (2 Credits)
This is a core course of the Horticulture graduate program. Provides an advanced understanding of entomology and its relationship to other disciplines through critical analysis of the scientific literature. Students practice synthesizing information and presenting findings to peers. Instructors, topics, and specific learning objectives vary from term to term. CROSSLISTED as HORT 518.
Equivalent to: HORT 518
This course is repeatable for 12 credits.

ENT 520. INSECT ECOLOGY. (3 Credits)
Insect ecology, evolution, and management. Biophysical ecology; foraging and feeding; life cycles; population dynamics, regulation, and control; species interactions including herbivore-plant, predator-prey, parasite-host, competition, and mutualism; diversity, food web structure, agricultural ecology, exercises merge models, experiments, and sampling. Offered even years.

ENT 540. ISSUES IN INSECT TOXICOLOGY. (3 Credits)
Introduction to concepts and mechanisms associated with molecular toxicology as it relates to insects, including interactions with naturally occurring and synthetic compounds. Overview of current research in insect toxicology including resistance to pesticides, protection of non-target species, and use of insects as model organisms. Discussion of laboratory and field approaches and potential strategies to address issues in insect toxicology.

ENT 542. PRINCIPLES OF INTEGRATED PEST MANAGEMENT: SYSTEMS DESIGN. (4 Credits)
Principles of integrated pest management design focusing on the use of systems analysis as a means to integrate management tactics, environmental and biological monitoring, pest control models, and implementation elements into a cohesive whole. Introduction to integrated pest management on websites. Students will design a hypothetical crop-pest management system. Lec/lab.

ENT 544. INSECT AGROECOLOGY. (3 Credits)
Agroecology incorporates ecological concepts and principles to the design and management of sustainable agricultural systems. Topics include: the role of insects in sustainable agricultural systems; application of the principles of insect ecology to better manage insect pests and maximize crop yield; conserving beneficial insects and other natural resources in agroecosystems and the surrounding landscape. CROSSLISTED as HORT 544.
Equivalent to: HORT 544

ENT 550. SEMINAR. (1-16 Credits)
This course is repeatable for 16 credits.

ENT 599. SPECIAL TOPICS. (1-16 Credits)
Important topics of current interest in the areas of systematics, insect physiology and toxicology, ecology and behavior, and pest management. Course content and title will change with each offering.
This course is repeatable for 16 credits.

ENT 601. RESEARCH. (1-16 Credits)
This course is repeatable for 16 credits.

ENT 603. THESIS. (1-16 Credits)
This course is repeatable for 999 credits.

ENT 605. READING AND CONFERENCE. (1-16 Credits)
This course is repeatable for 16 credits.

ENT 607. SEMINAR. (1-16 Credits)
This course is repeatable for 16 credits.
ENT 609. PRACTICUM IN TEACHING. (1-3 Credits)
Developing skills and competence in teaching under staff supervision; organization and presentation of instructional material by assisting in laboratory, recitation, and lectures. Graded P/N.
Equivalent to: CROP 609, PBG 609, SOIL 609
This course is repeatable for 9 credits.

ENT 699. SPECIAL TOPICS. (1-16 Credits)
Important topics of current interest in the areas of systematics, insect physiology and toxicology, ecology and behavior, and pest management. Course content and title will change with each offering.
This course is repeatable for 16 credits.
