USER EXPERIENCE RESEARCH MINOR

User experience and research focuses on the psychological aspects of the field of human's interactions with computer technologies. User experience research is a subarea of Human Computer Interaction, which is "an interdisciplinary program that focuses on the study of the interaction between people and technology and how that technology impacts society, and combines disciplines within the fields of computing and information science (information systems, software engineering, artificial intelligence and design) and the behavior sciences (cognitive science, cognitive psychology, sociology, organizational psychology, and social psychology). Includes instruction in information technology, cognitive and behavioral sciences, and systems design." [Integrated Postsecondary Education Data System]. Specifically, User Experience (UX) research focuses not on computing and information science, but cognitive science, cognitive psychology, sociology, organizational psychology, and social psychology, and experimental and statistical methods for testing psychological theories and hypotheses related to user experience.

Target students include students pursuing the Computer Science BS Applied Option, the Psychology BS, or the Digital Communication Arts BS degree who are interested in human factors, user experience research, and the application of human cognition, perception, and decision-making research.

Students in this program gain foundational skills in communication, teamwork, and project management, as well as specialized skills in user testing, user research design, and quantitative data analysis.

Career opportunities include UX design researcher, UX researcher, and UX psychologist.

Minor Code: 073

- Describe key concepts, principles and practices associated with the human-computer interaction and user experience with an emphasis on psychological science.
- Articulate how human factors, cognitive models and implementation constraints influence design and usability.
- Use effective writing skills for different purposes.
- Demonstrate effective presentation skills for different purposes.
- Function effectively as part of a team.
- Apply HCI content and user experience research skills to meaningful career goals.
- Demonstrate project management skills.
- Apply appropriate research methods to identify meaningful insights about people's needs, behaviors and experiences.
- Develop and apply specialized skills relevant to user experience, including iterative design and testing, prototyping, and creating wireframes and mockups.
- Students should consult their major advisors to see if specific courses are required for their major.
- Students must receive a grade of C– or better in any course applied toward the minor. Such courses cannot be taken with S/U grading.
- No more than 12 credits can count for both the User Experience Research minor and Psychology major.

Electives
Select a minimum of 3 courses from the following: 9-12

- PSY 442  PERCEPTION
- PSY 444  LEARNING AND MEMORY
- PSY 463  JUDGMENT AND DECISION MAKING
- PSY 494  ENGINEERING PSYCHOLOGY
- NMC 241  APPLIED MEDIA AESTHETICS
- NMC 392  WEB DESIGN AND PROGRAMMING
- NMC 393  SERVER SIDE PROGRAMMING
- NMC 394  INTERACTIVE DESIGN AND USER EXPERIENCE
- ANTH 330  *EVOLUTION OF PEOPLE, TECHNOLOGY, AND SOCIETY
  or CS 391  *SOCIAL AND ETHICAL ISSUES IN COMPUTER SCIENCE
  or PHL 330  *TECHNOLOGY AND ETHICS
  or WGSS 320  *GENDER AND TECHNOLOGY

Total Credits 29-33

*Baccalaureate Core Course (BCC)
