PUBLIC HEALTH GRADUATE MINOR

Also available via Ecampus.

The public health graduate minor is designed for students in other majors who are interested in public health. Our public health program is built on the foundation of biostatistics, environmental health sciences, epidemiology, global health, health promotion and health behavior, and health systems and policy. Our curricula incorporate an ecological approach to disease prevention and health promotion, including cultural, social, environmental, behavioral, and economic factors that impact population health.

Minor Code: 7580

Graduate minors require a minimum of 15 credits for masters students and 18 credits for doctoral students.

Students will design the curriculum with a faculty advisor from one of the public health graduate programs. For more information, contact a faculty member in one of the public health graduate programs or the associate dean for academic and faculty affairs in the College of Public Health and Human Sciences.
