

FISHERIES AND WILDLIFE (FW)

FW 107, ORIENTATION TO FISHERIES AND WILDLIFE, 1 Credit

Information relevant to academic pathways and career planning in the fields of fisheries and wildlife. Graded P/N.

Available via Ecampus

FW 113, INTRODUCTION TO MARINE LIFE IN THE SEA-MARINE BIRDS AND MAMMALS, 1 Credit

Introduces first- and second-year undergraduates, teachers and non-degree students to the breadth of marine science course offerings and research at Oregon State University's Hatfield Marine Science Center located in Newport, Oregon. Using an experiential based format, students collect field data to better understand marine mammals (whales, dolphins and porpoises), seabirds, and their interactions with their environment. Lec/lab. Graded P/N.

FW 199, SPECIAL STUDIES, 1-16 Credits

Graded P/N.

Equivalent to: FW 199H

This course is repeatable for 16 credits.

FW 199H, SPECIAL STUDIES, 1-16 Credits

Graded P/N.

Attributes: HNRS – Honors Course Designator

Equivalent to: FW 199

This course is repeatable for 16 credits.

FW 209, CAREER SKILLS IN FISHERIES AND WILDLIFE SCIENCES, 1 Credit

A foundation for life-long career development in fisheries and wildlife sciences. Practice the skills needed to search, apply, and attain internships and jobs.

Prerequisite: FW 107 with P or better

Available via Ecampus

FW 251, PRINCIPLES OF FISH AND WILDLIFE CONSERVATION, 3 Credits

History of conservation and natural resource use; ecological principles, and social and economic limitations of conservation; principles and practices of wildlife and fisheries management; role of research in management.

Recommended: One course in introductory biology

Available via Ecampus

FW 255, FIELD SAMPLING OF FISH AND WILDLIFE, 3 Credits

Introduction to sampling populations and communities of vertebrate animals emphasizing sampling design, collection and management of data, and communication of results.

Recommended: WR 121 and familiarity with personal computers.

Available via Ecampus

FW 289, COMMUNICATION SKILLS FOR FISHERIES AND WILDLIFE PROFESSIONALS, 4 Credits

Introduces students to the theoretical and practical dimensions of interpersonal and public communication in a natural resource management field. Lec/rec.

Recommended: FW 251

Available via Ecampus

FW 301, FIELD TECHNIQUES FOR MARINE MAMMAL CONSERVATION, 1 Credit

A laboratory and hands-on experience covering field techniques, computer software for data organization and analyses, and understanding the practical management conservation application for students who are taking or have taken FW/BI 302, Biology and Conservation of Marine Mammals. Taught summer term at HMSC, Newport, OR.

Prerequisite: BI 302 (may be taken concurrently) with D- or better or FW 302 (may be taken concurrently) with D- or better

FW 302, BIOLOGY AND CONSERVATION OF MARINE MAMMALS, 4 Credits

An examination of the biology of whales, pinnipeds, and other marine mammals, including general adaptations to a marine existence; systematics and biogeography; reproduction; diving physiology; communication and echolocation; feeding and migratory behavior; and marine mammal/human interactions; including conservation issues. Taught at Hatfield Marine Science Center OR online through Ecampus.

Equivalent to: BI 302

Recommended: One year of introductory biology

Available via Ecampus

FW 303, SURVEY OF GEOGRAPHIC INFORMATION SYSTEMS IN NATURAL RESOURCE, 3 Credits

Concepts underlying geographic information systems, global positioning system, and remote sensing; application to management and research, data quality issues, and case studies. Not a lab/skills class.

Available via Ecampus

FW 307, SPECIALIZATION DEVELOPMENT, 1 Credit

Students will examine career alternatives, develop career goals, learn what knowledge, skills, and abilities are important for diverse careers in fisheries and wildlife conservation, and develop an academic and lifelong plan for achieving their career goals. This course is intended to assist students in developing a specialization in fisheries and wildlife sciences. Graded P/N.

Equivalent to: FW 207

Recommended: FW 209

Available via Ecampus

FW 311, ORNITHOLOGY, 3 Credits

Survey of the adaptations of birds to a diverse array of habitats. Topics include origins, anatomy, reproductive strategies, migration, flight, behavior, physiology, nutrition, and conservation.

Recommended: One year introductory biology.

Available via Ecampus

FW 312, SYSTEMATICS OF BIRDS, 2 Credits

External anatomy, classification of birds of the world, and field identification of birds by sight and song. Field trips required.

Recommended: One year introductory biology.

Available via Ecampus

FW 315, ICHTHYOLOGY, 3 Credits

A survey of the diversity of biological adaptations of fishes. Topics include physiological and zoogeographical adaptations, reproduction, evolution, cladogenesis, morphology, behavior, and genetics.

Equivalent to: FW 313

Recommended: One year introductory biology.

Available via Ecampus

FW 316, SYSTEMATICS OF FISHES, 3 Credits

Phylogenetic diversity, evolution, relationships and identification of the world's fishes, with particular focus on Oregon fishes. Includes identification, anatomy, use of keys, introduction to the comparative method, systematic theory, taxonomy, field collection and specimen curation. Lec/lab.

Prerequisite: (BI 211 with D- or better or BI 211H with D- or better or BI 221 with D- or better or BI 221H with D- or better or BI 204 with D- or better) and (BI 212 [D-] or BI 212H [D-] or BI 222 [D-] or BI 222H [D-] or BI 205 [D-]) and (BI 213 [D-] or BI 213H [D-] or BI 223 [D-] or BI 223H [D-] or BI 206 [D-])

Recommended: FW 315

Available via Ecampus

FW 317, MAMMALOLOGY, 3 Credits

A survey of the origins, evolution, diversity, and adaptations of mammals to diverse environments. Topics include taxonomy, reproduction, sensory perception, herbivory, population cycles and behavior.

Recommended: One year introductory biology.

Available via Ecampus

FW 318, SYSTEMATICS OF MAMMALS, 2 Credits

A survey of the phylogenetic diversity of the mammals in Oregon from a habitat/community perspective. Identifying, using keys, and measuring specimens will be stressed.

Recommended: One year introductory biology.

Available via Ecampus

FW 320, INTRODUCTORY POPULATION DYNAMICS, 4 Credits

Principles and concepts of population dynamics related to fish and wildlife populations; methods of estimating abundance, mortality, sustainable harvest levels and extinction risk; hands-on introduction to models for population analysis. Lec/lab.

Prerequisite: BI 370 (may be taken concurrently) with D- or better or BI 370H (may be taken concurrently) with D- or better or BI 371 (may be taken concurrently) with D- or better

Recommended: Introductory statistics and mathematics equivalent to MTH 245 or higher

Available via Ecampus

FW 321, APPLIED COMMUNITY AND ECOSYSTEM ECOLOGY, 3 Credits

Perspectives in community and ecosystem ecology, and their use in management of fisheries and wildlife resource systems.

Prerequisite: FW 320 (may be taken concurrently) with D- or better

Available via Ecampus

FW 323, MANAGEMENT PRINCIPLES OF PACIFIC SALMON IN THE NORTHWEST, 3 Credits

Explores the nature of the salmon problem in the Northwest. Experts from diverse disciplines describe principles of salmon biology, habitat ecology and management, socioeconomics of direct and indirect users, and government policies.

Available via Ecampus

FW 324, *FOOD FROM THE SEA, 3 Credits

Where does seafood come from, and how does seafood arrive on a plate?

How productive are the world's oceans, and can the oceans continue to produce enough to feed (and employ) the masses? How do different cultures, ethnicities, and regions of the world rely upon food from the sea for daily meals? Food from the Sea is an exploration of the cultural, societal, economic, practical, and environmental features of the protein that feeds billions. (Bacc Core Course)

Attributes: CSGI – Core, Synth, Global Issues

Available via Ecampus

FW 325, *GLOBAL CRISES IN RESOURCE ECOLOGY, 3 Credits

Historical and contemporary implications of the impacts of burgeoning human populations on rates and patterns of global ecological change. Changes in ecosystem processes and crises of species extinction in the context of cultural and political institutions. (Bacc Core Course).

Attributes: CSGI – Core, Synth, Global Issues

Available via Ecampus

FW 326, INTEGRATED WATERSHED MANAGEMENT, 3 Credits

A comprehensive approach to watershed management, one that includes biophysical, socioeconomic, planning and education related topics. Intended for students interested in the sustainable management of natural resources.

Recommended: FW 251

Available via Ecampus

FW 328, WILDLIFE CAPTURE AND IMMOBILIZATION, 2 Credits

Manual and chemical restraint methods are covered with an emphasis on darting equipment, animal and human safety, drug pharmacology and species specific recommendations.

This course is repeatable for 4 credits.

Available via Ecampus

FW 331, ECOLOGY OF MARINE AND ESTUARINE BIRDS, 4 Credits

Focusing on how marine and estuarine birds are adapted for life at sea. Topics include morphology, physiology, foraging ecology, and biogeography as well as introductory oceanography. Field trips.

Recommended: One year introductory biology.

FW 340, *MULTICULTURAL PERSPECTIVES IN NATURAL RESOURCES, 3 Credits

Explores multicultural influences on development of natural resources in the American West. Effects of diverse social values on changes in the physical landscape and biodiversity. (Bacc Core Course)

Attributes: CPDP – Core, Perspective, Difference/Power/Discrimination

Equivalent to: FW 340H

Available via Ecampus

FW 341, FISH AND WILDLIFE LAW ENFORCEMENT, 2 Credits

Introduction to the philosophy, purposes, and methods of enforcing natural resource laws, emphasizing fish and wildlife laws.

FW 345, *GLOBAL CHANGE BIOLOGY, 3 Credits

Global Change Biology is the study of the impact of climate change on natural systems and actions to mitigate (slow) or adapt to climate change. Global climate change is having dramatic effects on natural resources including fish and wildlife populations and their habitats. Students will gain an understanding of the role that natural ecosystems (oceans, forests, wetlands, grasslands etc.) play in regulating the climate; how land use affects the earth's climate; how climate change will affect fish, wildlife and their habitats; and the role that managers and researchers can play in mitigating and adapting to climate change. (Bacc Core Course)

Attributes: CSGI – Core, Synth, Global Issues

Recommended: Introductory biology and ecology courses such as BI 370

FW 350, *ENDANGERED SPECIES, SOCIETY AND SUSTAINABILITY, 3 Credits

Provides a general background to endangered species biology, and the social and economic implications of the legislation enacted to conserve endangered species (Endangered Species Act, CITES Treaty). (Bacc Core Course)

Attributes: CSST – Core, Synthesis, Science/Technology/Society

Recommended: FW 251

Available via Ecampus

FW 356, *CITIZEN SCIENCE, 3 Credits

Citizen science involves non-specialists in scientific studies addressing large challenges best solved through collaboration. Citizens contribute data scientists may not otherwise be able to obtain, while improving their understanding of the scientific process, integrating technology into the learning process, and generating new knowledge for society. (Bacc Core Course)

Attributes: CSST – Core, Synthesis, Science/Technology/Society

Available via Ecampus

FW 360, *ORIGINS OF F&W MANAGEMENT-EVOLUTION, GENETICS, AND ECOLOGY, 3 Credits

Examines genetics and human interactions with fisheries and wildlife from an ecological and evolutionary perspective. Basic principles of environmental interactions, and how humans interact with other species and their environments in the disciplines commonly recognized as fisheries, wildlife and conservation sciences. (Baccalaureate Core Course)

Attributes: CSST – Core, Synthesis, Science/Technology/Society

Recommended: Two terms of coursework at OSU

Available via Ecampus

FW 366, ENVIRONMENTAL CONTAMINANTS IN FISH AND WILDLIFE, 3 Credits

Environmental contamination is an important threat to many fish and wildlife populations and the habitats and prey upon which they rely. The field of ecotoxicology links the ecology of fish and wildlife with toxicology of environmental contaminants, and so spans political, scientific, and public relations realms. Through the pairing of introductory concepts with key case studies, this course provides students with a preparatory framework for understanding toxicological issues of importance for those focused on studying, managing or conserving fish and wildlife populations.

Prerequisite: (BI 204 with D- or better or BI 211 with D- or better or BI 211H with D- or better) and (BI 205 [D-] or BI 212 [D-] or BI 212H [D-])

Available via Ecampus

FW 370, CONSERVATION GENETICS, 4 Credits

A foundational course in preparation for a degree in Fisheries and Wildlife or other degrees focused on conservation of natural resources.

Covers a broad range of topics associated with issues surrounding genetics that working professionals in the biological sciences should be conversant about. One of the most important aspects of the course is the development of problem-solving and critical-thinking skills.

Prerequisite: (BI 211 with D- or better or BI 211H with D- or better or BI 221 with D- or better or BI 221H with D- or better or BI 204 with D- or better) and (BI 212 [D-] or BI 212H [D-] or BI 222 [D-] or BI 222H [D-] or BI 205 [D-]) and (BI 213 [D-] or BI 213H [D-] or BI 223 [D-] or BI 223H [D-] or BI 206 [D-])

Recommended: One year introductory biology

Available via Ecampus

FW 391, *RIDGE TO REEF: SUSTAINABLE RESOURCE MANAGEMENT IN PALAU, 4 Credits

How do small islands address issues of natural resource management, food security, and sustainability? What role do communities, governments, and non-profits play in addressing these issues? Can traditional ecological knowledge help solve these challenges? What about climate change on small Islands? The Republic of Palau will be our classroom. Students will work with and learn from fishers, farmers, community leaders, traditional chiefs, terrestrial and marine biologists, and policy makers. Key topics include food security/production, climate change adaptation, protected area management, biocultural conservation, sustainable forest management, watershed management, sustainable development, coral reef and fisheries management, biodiversity measurement methods and ecosystem restoration.

Attributes: CSGI – Core, Synth, Global Issues

FW 401, RESEARCH, 1-16 Credits

This course is repeatable for 16 credits.

Available via Ecampus

FW 403, THESIS, 1-16 Credits

This course is repeatable for 32 credits.

FW 405, READING AND CONFERENCE, 1-16 Credits

This course is repeatable for 16 credits.

Available via Ecampus

FW 407, SEMINAR, 1-16 Credits

Graded P/N. Taught at Hatfield Marine Science Center.

Equivalent to: FW 407H

This course is repeatable for 16 credits.

Available via Ecampus

FW 407H, SEMINAR, 1-16 Credits

Graded P/N. Taught at Hatfield Marine Science Center.

Attributes: HNRS – Honors Course Designator

Equivalent to: FW 407

This course is repeatable for 16 credits.

FW 408, WORKSHOP, 1-16 Credits

This course is repeatable for 16 credits.

FW 410, INTERNSHIP, 1-6 Credits

This course is repeatable for 99 credits.

Available via Ecampus

FW 415, FISHERIES AND WILDLIFE LAW AND POLICY, 3 Credits

Provides students with an understanding of the key legal frameworks within which they will work to conserve fish and wildlife resources. Examines federal law and policy relating to allocation and conservation of fish and wildlife resources.

Recommended: PS 201 or other introductory political science course.

Available via Ecampus

FW 418, URBAN ECOLOGY, 3 Credits

Understand how an increasing human population increases pressure on fish and wildlife communities and resources within ecosystems. Examines the interactions between humans and animal species within urban areas and the effects of urbanization on species, communities, and ecosystems. Topics include conserving biodiversity, invasive species, human health and well-being, and urban planning.

Recommended: FW 255, BI 370

Available via Ecampus

FW 419, THE NATURAL HISTORY OF WHALES AND WHALING, 3 Credits

Addresses the natural history of whales as a unique example of adaptation in an evolutionary lineage, and the history of whaling as a general example of the failings of international resource management.

Recommended: Some background in vertebrate ecology and evolution or genetics

Available via Ecampus

FW 421, AQUATIC BIOLOGICAL INVASIONS, 4 Credits

An overview of the background, theory, evolution, ecology, politics and conservation of invasions by introduced species in aquatic environments. Taught at Hatfield Marine Science Center OR online through Ecampus.

Equivalent to: BI 421

Recommended: One year of university-level biology.

Available via Ecampus

FW 422, INTRODUCTION TO OCEAN LAW, 3 Credits

Examination of US law and primary international law focused on fisheries management with coverage of regulation of other ocean resources including energy, marine mammals, endangered species, pollution, and protected areas. Final project is intended to provide students with hands-on exposure to real-world fisheries and ocean management issues.

Available via Ecampus

FW 426, COASTAL ECOLOGY AND RESOURCE MANAGEMENT, 5 Credits

Study of the ecology and management of coastal marine and freshwater ecosystems as well as natural resources, emphasizing experimental (participatory) learning in a field station setting. Lec/lab.

FW 427, PRINCIPLES OF WILDLIFE DISEASES, 4 Credits

Ecological aspects of important diseases affecting North American wildlife will be discussed. Demonstrations will mainly cover migratory birds, carnivores and ruminants. Lec/lab. Ecampus sections do not use lab demonstrations.

Available via Ecampus

FW 433, POPULATION DYNAMICS FOR CONSERVATION, 4 Credits

A synthesis of the principles of population dynamics from the viewpoint of a resource manager. Particular attention is paid to populations structured by age, size, or over space, and considering both fisheries and wildlife management. Laboratory work uses computer programming in the R language to implement examples from lecture.

Prerequisite: (FW 320 with C or better or BI 483 with C or better) and ((MTH 227 with C or better or MTH 228 with C or better) or (MTH 251 with C or better or MTH 252 with C or better))

FW 434, ESTUARINE ECOLOGY, 4 Credits

Integrated and synthetic training in the ecological processes of estuarine environments, with emphases on ecological interactions among organisms and the biogeochemical cycling of carbon and nitrogen. Topics include geomorphology, estuarine physics and chemistry, primary and secondary producers, ecosystem metabolism, element cycling, food webs, fisheries, restoration, management, and impacts of climate. Field trip required, transportation fee charged. CROSSLISTED as FW 434/OC 434 and FW 534/OC 534.

Equivalent to: OC 434

Available via Ecampus

FW 435, ^WILDLIFE IN AGRICULTURAL ECOSYSTEMS, 3 Credits

Examines the relationships between agricultural production and fish and wildlife populations and communities. Explores the impacts of agricultural practices on fish and wildlife. Field trips required; transportation fee charged. OSU Ecampus students are not required to attend field trips. (Writing Intensive Course)

Attributes: CWIC – Core, Skills, WIC

Recommended: BI 370 and FW 251

Available via Ecampus

FW 439, ^HUMAN DIMENSIONS OF FISHERIES AND WILDLIFE MANAGEMENT, 3 Credits

Examines the human dimensions of fisheries and wildlife including economics, policy, communications, and management. Focuses on the application of social scientific theories and approaches to fisheries and wildlife issues. Independent and group work with a substantial writing component. (Writing Intensive Course)

Attributes: CWIC – Core, Skills, WIC

Recommended: FW 255, FW 289 and completion of human dimensions coursework

Available via Ecampus

FW 445, ECOLOGICAL RESTORATION, 4 Credits

Fundamentals of restoring and reclaiming disturbed landscapes and ecosystems. Topics covered include types and assessment of site conditions; determining restoration goals and feasibility; hydrologic, biotic, and soil functions and their importance in restoration; and measures of successful restoration. CROSSLISTED as FES 445/FW 445 and FES 545/FW 545.

Equivalent to: FES 445, FOR 445

Recommended: BI 370 or BI 370H

FW 451, AVIAN CONSERVATION AND MANAGEMENT, 3 Credits

Identification, classification, life history strategies, ecology and management of upland and migratory birds.

Recommended: FW 311

Available via Ecampus

FW 452, BIODIVERSITY CONSERVATION IN MANAGED FORESTS, 3 Credits

Designed for students in forestry, wildlife, fisheries and related fields. Introduces the concepts of, and approaches to, managing forest stands, landscapes and regions to achieve desired habitat conditions for indicator species and conservation of biological diversity. CROSSLISTED as FES 452/FW 452.

Equivalent to: FES 452

Recommended: FES 240 or FES 341 or BI 370

Available via Ecampus

FW 454, ^FISHERY BIOLOGY, 4 Credits

Principles and methods used in studying the biology of fishes; ecological requirements of freshwater and anadromous fishes; principles and practices in sport fishery management. (Writing Intensive Course)

Attributes: CWIC – Core, Skills, WIC

Prerequisite: FW 315 with D- or better and FW 320 [D-]

Available via Ecampus

FW 456, FRESHWATER ECOLOGY AND CONSERVATION, 5 Credits

Physical, chemical, biological, and environmental concepts in continental aquatic systems. Includes techniques related to assessing aquatic resources their management and conservation. Lec/lab.

Prerequisite: BI 370 with D- or better or BI 371 with D- or better

Recommended: 9 credits of upper-division biological sciences

Available via Ecampus

FW 458, MAMMAL CONSERVATION AND MANAGEMENT, 4 Credits

A thorough understanding of the management, conservation, and ecology of mammals in North America; includes population dynamics, harvest management, techniques to determine abundance, diets, reproduction, and the cultural and political variables that contribute to formulation of management programs.

Recommended: 9 credits of upper-division biological sciences.

Available via Ecampus

FW 462, ECOSYSTEM SERVICES, 3 Credits

Introduces students to the ecological, economic, and social/ethical issues involved in the study of ecosystem services, with a major focus on biological components involved in ecosystem services. Topics covered include: 1) an introduction to the roles that living organisms play in the provision of ecosystem services, 2) the relationship of ecosystem functions and services, 3) the societal factors that influence this relationship, 4) general categories of ecosystem services, 5) identification of potential ecosystem services in terrestrial and aquatic systems, 6) an overview of the methods of valuation, and 7) translating ecosystems functions to services. Case studies will be used to illustrate key concepts and relationships within different ecological and social contexts.

Recommended: BI 370

Available via Ecampus

FW 464, MARINE CONSERVATION BIOLOGY, 3 Credits

Lectures, group library research, and class debates on current issues regarding the conservation of biodiversity in the sea. Topics include overfishing, invasive species, eutrophication, marine pollution, and global warming, as well as means of addressing these threats.

Prerequisite: BI 370 with D- or better or BI 370H with D- or better
Equivalent to: BI 464

FW 465, MARINE FISHERIES, 4 Credits

A global perspective on commercial fish and shellfish harvesting with emphasis on fishing technology and policy issues. Offered fall term in odd years.

Recommended: FW 315

FW 467, ANTARCTIC SCIENCE AND CONSERVATION, 4 Credits

Explores the history, geology, climate, and ecosystems of Antarctica, with an emphasis on current research and conservation issues. Focuses on critical thinking skills developed through independent research on a topic of interest, an internal peer review project, and discussions of relevant case studies in Antarctic research.

Available via Ecampus

FW 469, METHODS IN PHYSIOLOGY AND BEHAVIOR OF MARINE MEGAFUNA, 4 Credits

An in-depth study of marine megafauna (mammals, birds, turtles) with an emphasis on methods and analyses of behavior and physiology for conservation. Lab and field exercises include investigations into the behavior–physiology nexus of diving, migration, thermoregulation, energy expenditure, and mating systems. Research techniques to be explored will include, for example, tracking and remote biotelemetry monitoring technologies, respirometry, genetics, and direct field study observation. Theoretical approaches, field techniques and statistical analyses will help prepare students for a career in fisheries or wildlife science. Lec/lab. Taught at HMSC.

Prerequisite: ((BI 211 with C- or better or BI 211H with C- or better) and (BI 212 [C-] or BI 212H [C-]) and (BI 213 [C-] or BI 213H [C-])) or ((BI 221 [C-] or BI 221H [C-]) and (BI 222 [C-] or BI 222H [C-]) and (BI 223 [C-] or BI 223H [C-])) or (BI 204 [C-] and BI 205 [C-] and BI 206 [C-])

Recommended: FW 302, FW 320, FW 331 and FW 475

FW 470, *ECOLOGY AND HISTORY: LANDSCAPES OF THE COLUMBIA BASIN, 3 Credits

Integrates environmental history and landscape ecology of the Columbia River Basin from geologic origins to the present, to create an understanding of change caused by natural processes and human activities. (Bacc Core Course)

Attributes: CSST – Core, Synthesis, Science/Technology/Society

Equivalent to: HSTS 470

Recommended: (HST 201 and HST 202 and HST 203) or BI 370

FW 471, ENVIRONMENTAL PHYSIOLOGY OF FISHES, 4 Credits

Principles of the functional biology of fishes with emphasis on environmental interactions and management implications.

Recommended: FW 315 and (BI 370 or BI 371)

FW 473, FISH ECOLOGY, 4 Credits

Behavior of fishes as a mode of accommodation to various ecological and evolutionary constraints. Importance of heritable and learned patterns to population and community dynamics. Application of behavioral studies to the solution of management problems. Lec/lab/rec.

Prerequisite: (BI 370 with D- or better or BI 370H with D- or better) and FW 315 [D-]

Available via Ecampus

FW 474, EARLY LIFE HISTORY OF FISHES, 4 Credits

Overview of diversity of development patterns in fishes; emphasis on morphology, life history, and evolution. Offered alternate years.

Recommended: FW 315

FW 475, WILDLIFE BEHAVIOR, 4 Credits

Adaptive significance of egocentric and social behavior of wildlife species. Implications of behavior in sound management practice.

Recommended: 9 credits of upper-division biology.

Available via Ecampus

FW 476, FISH PHYSIOLOGY, 4 Credits

Physiological specializations and adaptations of major groups of fishes.

Prerequisite: FW 315 with D- or better

Available via Ecampus

FW 479, WETLANDS AND RIPARIAN ECOLOGY, 3 Credits

Ecology of riparian freshwater and estuarine wetlands of the Pacific Northwest. Effects of land use on ecosystem structure, function, biodiversity, and restoration will be explored.

Recommended: BI 370 or BI 371

Available via Ecampus

FW 481, WILDLIFE ECOLOGY, 3 Credits

Interrelationships of wildlife, environmental change. Predicting and measuring responses of wildlife to altered habitat conditions

Prerequisite: BI 370 with D- or better or BI 370H with D- or better or BI 371 with D- or better

Available via Ecampus

FW 488, PROBLEM SOLVING IN FISHERIES AND WILDLIFE SCIENCE, 3 Credits

A capstone course designed to introduce students to the synthesis of scientific information on species, habitats and ecosystems and the use of such data in shaping fisheries and wildlife conservation, management and policy. Includes a group problem-solving project and case studies. For FW majors in their senior year.

Prerequisite: FW 320 with D- or better and FW 321 (may be taken concurrently) [D-]

Recommended: 400-level FW course work (e.g., FW 426 or FW 454 or FW 481)

Available via Ecampus

FW 489, EFFECTIVE COMMUNICATIONS IN FISHERIES AND WILDLIFE SCIENCE, 3 Credits

Centers on the synthesis and interpretation of data and effective communication of that information in written and oral communication to diverse audiences including scientists, managers, administrators and the general public.

Available via Ecampus

FW 491, FISH DISEASES IN CONSERVATION BIOLOGY AND AQUACULTURE, 3 Credits

Introduction to diseases of fish including pathogens important to aquaculture and ornamental industries as well as to wild fish populations and conservation programs. CROSSLISTED as FW 491/MB 491 and FW 591/MB 591.

Equivalent to: MB 491

Recommended: 9 credits of upper-division fisheries biology.

FW 493, FIELD METHODS FOR MARINE RESEARCH, 3 Credits

The primary focus is providing hands-on experience in a small class exploring various field sampling methodologies, research planning logistics, and field operations in estuary and nearshore environments. Topics covered include measurement and collection methods, animal handling techniques, equipment care and handling, sampling strategy, experimental design, data management planning and, if possible, small boat work.

Recommended: One year of biology

FW 496, FISH DISEASES IN CONSERVATION BIOLOGY AND AQUACULTURE LAB, 2 Credits

This laboratory complements lectures in FW/MB 491/591, with students learning basic necropsy techniques; identification of bacterial, viral and metazoan pathogens; and molecular identification methods. CROSSLISTED as FW 496/MB 496 and FW 596/MB 596.

Equivalent to: MB 496

Recommended: MB 303 or other upper-division laboratory course.

FW 497, ^AQUACULTURE, 3 Credits

Principles and practices for the aquaculture of fish, shellfish, and algae. (Writing Intensive Course.)

Attributes: CWIC – Core, Skills, WIC

Recommended: 9 credits of upper-division biology.

Available via Ecampus

FW 498, AQUACULTURE LABORATORY, 3 Credits

Biology and culture requirements of fish, shellfish, and algae. Emphasis on laboratory culture techniques and practical experience in handling organisms. Taught at Hatfield Marine Science Center.

Recommended: 9 credits of upper-division biology.

FW 499, SPECIAL TOPICS IN FISHERIES AND WILDLIFE, 0-16 Credits

Various topics in fisheries science and wildlife science. Taught at Hatfield Marine Science Center and Corvallis campus.

Equivalent to: ENT 499

This course is repeatable for 16 credits.

Available via Ecampus

FW 501, RESEARCH, 1-16 Credits

This course is repeatable for 16 credits.

Available via Ecampus

FW 502, TEACHING METHODS IN FISHERIES AND WILDLIFE, 1 Credit

This is a discussion course designed to help new GTAs and instructors who are learning the trials and tribulations of university-level teaching in our department. This is a great course for students who are interested in hearing more about teaching approaches, grading and assessment, student communication, problem students, and development of teaching Graded P/N.

FW 503, THESIS, 1-16 Credits

This course is repeatable for 999 credits.

Available via Ecampus

FW 505, READING AND CONFERENCE, 1-16 Credits

This course is repeatable for 16 credits.

Available via Ecampus

FW 506, PROJECTS, 1-6 Credits

Projects are synthesis papers or outreach products that are developed with a mentor from campus, a natural resource agency, or the student's place of employment. The purpose of your project is to contribute to the field of study with a product that reflects the principles and applications learned in your classes.

This course is repeatable for 12 credits.

Available via Ecampus

FW 507, SEMINAR, 1-16 Credits

Selected Topics. Taught at Hatfield Marine Science Center and Corvallis campus.

This course is repeatable for 16 credits.

Available via Ecampus

FW 508, WORKSHOP, 1-16 Credits

This course is repeatable for 16 credits.

FW 510, PROFESSIONAL INTERNSHIP, 1-16 Credits

This course is repeatable for 10 credits.

Available via Ecampus

FW 514, PROFESSIONAL DEVELOPMENT: MEETING COMMUNICATIONS, 1-3 Credits

Fisheries and wildlife professionals use meetings of scientists, managers and stakeholders to communicate key findings and develop consensus recommendations for policy. This experiential learning course exposes students to a scientific or management meeting in their chosen field (fisheries, wildlife, ecology, or conservation biology) and gets them to think about how meetings function as well as their content.

This course is repeatable for 3 credits.

Available via Ecampus

FW 515, FISHERIES AND WILDLIFE LAW AND POLICY, 3 Credits

Provides students with an understanding of the key legal frameworks within which they will work to conserve fish and wildlife resources. Examines federal law and policy relating to allocation and conservation of fish and wildlife resources.

Recommended: PS 201 or other introductory political science course.

Available via Ecampus

FW 518, URBAN ECOLOGY, 3 Credits

Understand how an increasing human population increases pressure on fish and wildlife communities and resources within ecosystems. Examines the interactions between humans and animal species within urban areas and the effects of urbanization on species, communities, and ecosystems. Topics include conserving biodiversity, invasive species, human health and well-being, and urban planning.

Available via Ecampus

FW 519, THE NATURAL HISTORY OF WHALES AND WHALING, 3 Credits

Addresses the natural history of whales as a unique example of adaptation in an evolutionary lineage, and the history of whaling as a general example of the failings of international resource management.

Recommended: Some background in vertebrate ecology and evolution or genetics

Available via Ecampus

FW 521, AQUATIC BIOLOGICAL INVASIONS, 4 Credits

An overview of the background, theory, evolution, ecology, politics and conservation of invasions by introduced species in aquatic environments. Taught at Hatfield Marine Science Center OR online through Ecampus.

Recommended: One year of university-level biology.

Available via Ecampus

FW 522, INTRODUCTION TO OCEAN LAW, 3 Credits

Examination of US law and primary international law focused on fisheries management with coverage of regulation of other ocean resources including energy, marine mammals, endangered species, pollution, and protected areas. Final project is intended to provide students with hands-on exposure to real-world fisheries and ocean management issues.

Available via Ecampus

FW 523, MONITORING WILDLIFE POPULATIONS AND THEIR HABITATS, 3 Credits

An overview of monitoring plan design and the conceptual background needed to understand and critique monitoring plans, and have the basic skills to develop and implement a monitoring program as part of an interdisciplinary team.

Recommended: Introductory course in statistics and introductory course in ecology.

Available via Ecampus

FW 524, INTRODUCTION TO FISHERIES ASSESSMENT, 3 Credits

Fisheries management strategies rely on models that predict a population's responses to exploitation. This course introduces approaches commonly used to assess and evaluate the dynamics and status of a population. Provides an overview of the terminology, data requirements, underlying rationale, assumptions, limitations and uncertainty associated with stock assessments.

Recommended: College algebra, introductory statistics and, if unfamiliar with data collection and analysis methods in fisheries, FW 454/554

Available via Ecampus

FW 526, COASTAL ECOLOGY AND RESOURCE MANAGEMENT, 5 Credits

Study of the ecology and management of coastal marine and freshwater ecosystems as well as natural resources, emphasizing experimental (participatory) learning in a field station setting. Lec/lab.

FW 527, PRINCIPLES OF WILDLIFE DISEASES, 4 Credits

Ecological aspects of important diseases affecting North American wildlife will be discussed. Demonstrations will mainly cover migratory birds, carnivores and ruminants. Lec/lab. Ecampus sections do not use lab demonstrations.

Available via Ecampus

FW 528, DIVERSITY AND IDENTIFICATION OF LARVAL FISHES, 3 Credits

Research on early life history stages of fishes has increased considerably in recent years, due to its importance in many research fields, such as fisheries science and oceanography, species conservation, systematics and morphology. Simultaneously, the ability to identify ichthyoplankton has decreased. This course is intended to provide students with an understanding of the evolutionary diversity of ichthyoplankton of the world.

Recommended: A completed 300-level systematics of fishes, ichthyology or comparative anatomy course.

Available via Ecampus

FW 529, ICHTHYOPLANKTON IDENTIFICATION LABORATORY, 2 Credits

Larval fishes are important in many research fields, and are part of many natural history collections. However, often museums are unable to provide the curatorial needs due to the lack of trained personnel. The lab will provide students with the necessary practical skills to identify larval fishes. Distinctive from the course 528, where students learn about the diversity and evolution of larval fish characters, the laboratory is designed to the identification of larvae from a real collection. Students are encouraged to bring unidentified ichthyoplankton samples or mixed species lots to the course to help with their identification.

FW 533, POPULATION DYNAMICS FOR CONSERVATION, 4 Credits

A synthesis of the principles of population dynamics from the viewpoint of a resource manager. Particular attention is paid to populations structured by age, size, or over space, and considering both fisheries and wildlife management. Laboratory work uses computer programming in the R language to implement examples from lecture.

Prerequisite: IB 592 with C or better

Recommended: (MTH 227 and MTH 228) or (MTH 251 and MTH 252)

FW 534, ESTUARINE ECOLOGY, 4 Credits

Integrated and synthetic training in the ecological processes of estuarine environments, with emphases on ecological interactions among organisms and the biogeochemical cycling of carbon and nitrogen. Topics include geomorphology, estuarine physics and chemistry, primary and secondary producers, ecosystem metabolism, element cycling, food webs, fisheries, restoration, management, and impacts of climate. Field trip required, transportation fee charged. CROSSLISTED as FW 434/OC 434 and FW 534/OC 534.

Equivalent to: OC 534

Available via Ecampus

FW 535, WILDLIFE IN AGRICULTURAL ECOSYSTEMS, 3 Credits

Examines the relationships between agricultural production and fish and wildlife populations and communities. Explores the impacts of agricultural practices on fish and wildlife. Field trips required; transportation fee charged. OSU Ecampus students are not required to attend field trips.

Recommended: BI 370 and FW 251

Available via Ecampus

FW 537, STRUCTURED DECISION MAKING IN NATURAL RESOURCE MANAGEMENT, 2 Credits

Structured decision making (SDM) is used for making natural resource management and policy decisions. It is an ideal framework for interdisciplinary teams to cooperate and identify the most effective management strategies. Graduate students from diverse backgrounds (natural resources, political science, others) are provided with an understanding of the SDM process.

Recommended: One year of college-level mathematics and one quarter of fish and wildlife management

Available via Ecampus

FW 538, STRUCTURED DECISION MAKING IN NATURAL RESOURCE MANAGEMENT LAB, 2 Credits

Students who are taking or have taken FW 537 are provided with the understanding of and ability to employ the techniques needed to build models that are used during the structured decision-making process. The laboratory emphasizes the use of graphical models and basic statistical techniques for building decision-making models. Lec/lab.

Prerequisite: FW 537 (may be taken concurrently) with D- or better

FW 540, VERTEBRATE POPULATION DYNAMICS, 4 Credits

Concepts in population ecology and quantitative approaches to managing wildlife populations; methods of parameter estimation, model structure, assumptions, and analysis, applications to common management issues.

Recommended: Upper-division population ecology and basic statistics courses

FW 544, QUANTITATIVE DECISION ANALYSIS FOR FISH AND WILDLIFE MANAGEMENT, 4 Credits

Decision analysis allows decision makers to examine the expected effects of different strategies before implementation; incorporate multiple objectives and values of stakeholders; determine the relative influence of various sources of uncertainty; and estimate the value of collecting additional data. Quantitatively oriented graduate students in natural resources are provided with an in-depth overview of decision analysis and adaptive management, emphasizing animal population management. Lec/lab.

Recommended: ST 511 and ST 512 or equivalent, basic background in animal population dynamics and management.

FW 545, ECOLOGICAL RESTORATION, 4 Credits

Fundamentals of restoring and reclaiming disturbed landscapes and ecosystems. Topics covered include types and assessment of site conditions; determining restoration goals and feasibility; hydrologic, biotic, and soil functions and their importance in restoration; and measures of successful restoration. CROSSLISTED as FES 445/FW 445 and FES 545/FW 545.

Equivalent to: FES 545, FOR 545

Recommended: BI 370 or BI 370H

FW 549, HISTORY OF FISHERIES SCIENCE, 3 Credits

Surveys the development of fisheries science, professionalization of the discipline, patronage, and the political, economic, and social context in which fisheries science operates.

Available via Ecampus

FW 550, TROPHIC CASCADES, 2-3 Credits

Theory and empirical analysis of terrestrial carnivore effects on plants and ecosystems as mediated through herbivores. Emphasis on large carnivores, frequency/strength of trophic cascades, implications for ecosystem function, management, and restoration. Lectures, current literature, discussions, field exercise, term paper, and student presentations. CROSSLISTED as FES 550/FW 550.

Equivalent to: FES 550, FOR 547, FW 547

This course is repeatable for 3 credits.

FW 551, AVIAN CONSERVATION AND MANAGEMENT, 3 Credits

Identification, classification, life history strategies, ecology and management of upland and migratory birds.

Recommended: FW 311 or equivalent course work.

Available via Ecampus

FW 552, FOREST WILDLIFE HABITAT MANAGEMENT, 4 Credits

Management of terrestrial vertebrates in forest ecosystems. Effects on silvicultural practices and landscape pattern on habitats and populations. CROSSLISTED as FES 552/FW 552.

Equivalent to: FES 552

Recommended: FOR 341 or equivalent course in ecology.

Available via Ecampus

FW 554, FISHERY BIOLOGY, 4 Credits

Principles and methods used in studying the biology of fishes; ecological requirements of freshwater and anadromous fishes; principles and practices in sport fishery management.

Recommended: FW 315 and FW 320

Available via Ecampus

FW 556, FRESHWATER ECOLOGY AND CONSERVATION, 5 Credits

Physical, chemical, biological, and environmental concepts in continental aquatic systems. Includes techniques related to assessing aquatic resources their management and conservation. Lec/lab.

Recommended: BI 370 or BI 371 or 9 credits of upper-division biological sciences

Available via Ecampus

FW 558, MAMMAL CONSERVATION AND MANAGEMENT, 4 Credits

A thorough understanding of the management, conservation, and ecology of mammals in North America; includes population dynamics, harvest management, techniques to determine abundance, diets, reproduction, and the cultural and political variables that contribute to formulation of management programs.

Recommended: 9 credits of upper-division biological sciences.

Available via Ecampus

FW 560, PSYCHOLOGY OF ENVIRONMENTAL DECISIONS, 3 Credits

Natural resource management and conservation programs have one thing in common: to be effective, they must consider how and why humans make decisions. This course approaches this topic from a psychological lens and will cover the psychological processes associated with making individual and group decisions, common biases and heuristics in our decision-making, and how these apply to diverse natural resource management and conservation issues. Students will learn how to take these aspects of human decision making into consideration when participating in or facilitating collaborative environmental programs.

Available via Ecampus

FW 562, ECOSYSTEM SERVICES, 3 Credits

Introduces students to the ecological, economic, and social/ethical issues involved in the study of ecosystem services, with a major focus on biological components involved in ecosystem services. Topics covered include: 1) an introduction to the roles that living organisms play in the provision of ecosystem services, 2) the relationship of ecosystem functions and services, 3) the societal factors that influence this relationship, 4) general categories of ecosystem services, 5) identification of potential ecosystem services in terrestrial and aquatic systems, 6) an overview of the methods of valuation, and 7) translating ecosystems functions to services. Case studies will be used to illustrate key concepts and relationships within different ecological and social contexts.

Recommended: BI 370 or equivalent course work.

Available via Ecampus

FW 563, CONSERVATION BIOLOGY OF WILDLIFE, 3 Credits

Overview of the field of conservation biology with emphasis on the relationship to conservation and management of wildlife.

Available via Ecampus

FW 564, MARINE CONSERVATION BIOLOGY, 3 Credits

Lectures, group library research, and class debates on current issues regarding the conservation of biodiversity in the sea. Topics include overfishing, invasive species, eutrophication, marine pollution, and global warming, as well as means of addressing these threats.

Equivalent to: BI 564

Recommended: BI 370 or BI 370H

FW 565, MARINE FISHERIES, 4 Credits

A global perspective on commercial fish and shellfish harvesting with emphasis on fishing technology and policy issues. Offered fall term in odd years.

Recommended: FW 315

FW 567, ANTARCTIC SCIENCE AND CONSERVATION, 4 Credits

Explores the history, geology, climate, and ecosystems of Antarctica, with an emphasis on current research and conservation issues. Focuses on critical thinking skills developed through independent research on a topic of interest, an internal peer review project, and discussions of relevant case studies in Antarctic research.

Available via Ecampus

FW 569, BEHAVIOR AND PHYSIOLOGY OF MARINE MEGAFUNA, 4 Credits

An in-depth study of marine megafauna (mammals, birds, turtles) with an emphasis on methods and analyses of behavior and physiology for conservation. Lab and field exercises include investigations into the behavior–physiology nexus of diving, migration, thermoregulation, energy expenditure, and mating systems. Research techniques to be explored will include, for example, tracking and remote biotelemetry monitoring technologies, respirometry, genetics, and direct field study observation. Theoretical approaches, field techniques and statistical analyses will help prepare students for a career in fisheries or wildlife science. Lec/lab. Taught at HMSC.

Recommended: FW 302, FW 320, FW 331, and FW 475

FW 570, ECOLOGY AND HISTORY: LANDSCAPES OF THE COLUMBIA BASIN, 3 Credits

Integrates environmental history and landscape ecology of the Columbia River Basin from geologic origins to the present, to create an understanding of change caused by natural processes and human activities.

Equivalent to: HSTS 570

Recommended: (HST 201 and HST 202 and HST 203) or BI 370

FW 571, ENVIRONMENTAL PHYSIOLOGY OF FISHES, 4 Credits

Principles of the functional biology of fishes with emphasis on environmental interactions and management implications.

Recommended: FW 315 and (BI 370 or BI 371)

FW 573, FISH ECOLOGY AND CONSERVATION, 4 Credits

Behavior of fishes as a mode of accommodation to various ecological and evolutionary constraints. Importance of heritable and learned patterns to population and community dynamics. Application of behavioral studies to the solution of management problems.

Recommended: BI 370 and FW 315

Available via Ecampus

FW 574, EARLY LIFE HISTORY OF FISHES, 4 Credits

Overview of diversity of development patterns in fishes; emphasis on morphology, life history, and evolution. Offered alternate years. CROSSLISTED as FW 574/OC 574.

Equivalent to: OC 574

Recommended: FW 315

FW 575, WILDLIFE BEHAVIOR, 4 Credits

Adaptive significance of egocentric and social behavior of wildlife species. Implications of behavior in sound management practice.

Equivalent to: FW 585

Recommended: 9 credits of upper-division biology.

Available via Ecampus

FW 576, FISH PHYSIOLOGY, 4 Credits

Physiological specializations and adaptations of major groups of fishes.

Recommended: FW 315

Available via Ecampus

FW 579, WETLANDS AND RIPARIAN ECOLOGY, 3 Credits

Ecology of riparian freshwater and estuarine wetlands of the Pacific Northwest. Effects of land use on ecosystem structure, function, biodiversity, and restoration will be explored.

Recommended: BI 370 or BI 371

Available via Ecampus

FW 580, STREAM ECOLOGY, 3 Credits

Structure and function of stream ecosystems, with emphasis on biological processes; physical and chemical relations; riparian influences and landscape perspectives.

Recommended: 9 credits of upper-division science.

Available via Ecampus

FW 581, WILDLIFE ECOLOGY, 3 Credits

Interrelationships of wildlife, environment and humans. Evaluation of properties and habitats of wildlife populations.

Recommended: (BI 370 or BI 371) and FW 311 and FW 320 and ST 351

Available via Ecampus

FW 583, SPECIES RECOVERY PLANNING AND RESTORATION, 3 Credits

The importance of communication in science is stressed and a broad knowledge of endangered species-related information is provided. Students develop the ability to critically evaluate published information in scientific literature and to present and summarize it as part of the collaborative species recovery planning process with a varied audience of stakeholders.

Recommended: FW 563 and FW 573

Available via Ecampus

FW 591, FISH DISEASES IN CONSERVATION BIOLOGY AND AQUACULTURE, 3 Credits

Introduction to diseases of fish including pathogens important to aquaculture and ornamental industries as well as to wild fish populations and conservation programs. CROSSLISTED as FW 491/MB 491 and FW 591/MB 591.

Equivalent to: MB 591

Recommended: 9 credits of upper-division fisheries biology.

FW 596, FISH DISEASES IN CONSERVATION BIOLOGY AND AQUACULTURE LAB, 2 Credits

This laboratory complements lectures in FW/MB 491/591, with students learning basic necropsy techniques; identification of bacterial, viral and metazoan pathogens; and molecular identification methods. CROSSLISTED as FW 496/MB 496 and FW 596/MB 596.

Equivalent to: MB 596

Recommended: MB 303 or other upper-division laboratory course.

FW 597, AQUACULTURE, 3 Credits

Principles and practices for the aquaculture of fish, shellfish, and algae.

Recommended: 9 credits of upper-division biology.

Available via Ecampus

FW 598, AQUACULTURE LABORATORY, 3 Credits

Biology and culture requirements of fish, shellfish, and algae. Emphasis on laboratory culture techniques and practical experience in handling organisms. Taught at Hatfield Marine Science Center.

Recommended: 9 credits of upper-division biology.

FW 599, SPECIAL TOPICS IN FISHERIES AND WILDLIFE, 0-16 Credits

Various topics in fisheries science and wildlife science. Taught at Hatfield Marine Science Center and Corvallis campus.

Equivalent to: ENT 499

This course is repeatable for 99 credits.

FW 601, RESEARCH, 1-16 Credits

This course is repeatable for 16 credits.

FW 603, THESIS, 1-16 Credits

This course is repeatable for 999 credits.

Available via Ecampus

FW 605, READING AND CONFERENCE, 1-16 Credits

This course is repeatable for 16 credits.

FW 606, PROJECTS, 1-16 Credits

This course is repeatable for 16 credits.

FW 607, SEMINAR, 1-16 Credits

This course is repeatable for 16 credits.

FW 620, ECOLOGICAL POLICY, 3 Credits

Policy issues associated with ecosystem management, risk assessment, biological diversity, ecosystem health, sustainability, invasive species, bioregionalism, globalization and transnational factors, and rights, ethics, and morals.

Recommended: Background in natural resources, environmental sciences, ecological sciences, ecological economics, political science, or similar discipline.

Available via Ecampus

FW 661, ANALYSIS OF ANIMAL POPULATIONS, 5 Credits

Quantitative methods for estimating parameters (abundance, survival, population stability) of animal populations. Emphasis is on vertebrate animals and statistical methods of hypothesis testing, parameter estimation, and inference testing. Offered odd-numbered years.

Recommended: ST 511 and ST 512 or equivalent

FW 699, SPECIAL TOPICS IN FISHERIES AND WILDLIFE, 1-4 Credits

Various topics in fisheries science and wildlife science. Taught at Hatfield Marine Science Center and Corvallis campus.

This course is repeatable for 8 credits.

FW 808, WORKSHOP, 1-16 Credits
